# COLLABORATION CHANGE

## Microsoft Dynamics

**Delivering high-quality care may be the number one priority for healthcare providers, but finding ways to reduce costs has become the number one imperative. The key lies in finding ways to streamline processes, eliminate inefficiency, increase productivity, and improve decision-making.**

Expanding the use of information technology is a smart way to reduce costs and improve access to patient and organisational information. A powerful computing infrastructure helps makes it easier to share the patient information necessary for clinical decisions and access the financial data required to drive business decisions. Equally important, today's technologies enable physicians, nurses, and administrators to work together as a single integrated team.

Microsoft Dynamics solutions are helping healthcare organisations around the globe improve financial and business processes and deliver more cost-effective healthcare.

But to get the most out of Microsoft Dynamics, you need the specialists.

As a Gold Certified Microsoft Business Solutions partner, we have worked with specialist health organisations across the public and private sectors, helping them respond to changes and deliver real business benefits based around the Microsoft Dynamics GP solution.

With us as your partner and Microsoft Dynamics as your platform, you can get up and running quickly, maximising the productivity of your people and increasing confidence that your solution will adapt to the changing needs of your organisation.

# INNOVATION SUCCESS

Working in partnership with you, we design, develop and implement a flexible, powerful and easy-to-use solution that meets your existing objectives, yet can be quickly and easily enhanced to meet the changing requirements of a growing organisation. In addition to ensuring that your employees are fully trained to maximise the benefits of your tailored solution, we also provide full support, including a help-desk staffed by Microsoft certified professionals.

The Microsoft Dynamics technology platform ensures that your organisation is able to assemble a complete, integrated set of leading-edge business applications that can be deployed quickly and inexpensively.

By using Microsoft Dynamics solutions, your organisation can:

#### Improve financials and streamline human resources management.

- Manage financial processes, drill down into summary information and track non-financial statistical data with ease.
- Shorten the budget cycle and generate accurate financial forecasts by using powerful budgeting and forecasting tools.
- Track and analyse vendor information, efficiently process payables, and make the most of vendor discounts while maximising cash flow.

You can also simplify human resources tasks with tools that are designed to give you greater control and security in managing sensitive payroll information and reducing administrative costs.

#### Implement collaborative healthcare.

The Microsoft Collaborative Health Initiative is helping healthcare organisations address industry challenges by using new technology as a powerful catalyst both to reduce costs and inefficiencies and improve the quality and affordability of healthcare.

Built on familiar technology, collaborative health solutions are replacing manual, paper-based transactions with automated processes that streamline information entry and help provide you with seamless access to information from any location.

#### Manage materials and comply with regulations.

- Manage an entire supply chain with distributed requisitions management and approval, control over purchasing and vendor management, and comprehensive inventory tracking and control.
- Ensure that supplies are on hand by using tools for expiration dates, serial and lot management, and multi-bin and multi-location items.
- Address regulatory compliance initiatives with a framework for storing, categorising, and searching compliance documents, tracking document modifications, and ensuring that managers have the necessary data and materials to maintain compliance.

Our solutions addresses a broad range of regulatory requirements and help provide the tools for implementing intelligent Health Level Seven (HL7) messaging for international standards.

## The Calyx Group:

Calyx is one of the most successful, independent, single source providers of comprehensive and flexible Microsoft Dynamics solutions in the UK and Ireland.

Our reputation for excellence has been built over 20 years. Today, with a turnover of £100m and over 500 experienced engineers, support and sales staff throughout the UK and Ireland, Calyx has the breadth of capability and depth of expertise to take care of every aspect of your ICT through its entire lifecycle.

With our unrivalled expertise in Microsoft Dynamics and unmatched experience in the deployment of customised solutions, we ensure that your solution is tailored to your existing business processes, applications and methodologies — and not the other way around!

**“The web-based solution provides us with a site that is rich in functionality. This is coupled with an intuitive interface that assures quick user buy-in. It has facilitated improvements in operational activities by allowing us to streamline and even eliminate cumbersome practices.”**
